A Tallysman Accutenna®
TW7875 Magnetic Mount Dual Band (L1/L5) GNSS Antenna

The TW7875 is precision tuned dual band, Accutenna® technology antenna for reception of GPS L1/L5, GLONASS G1, Beidou B1, Galileo E1/E5a, NavIC L5 and is especially designed for precision dual frequency positioning. The TW7875 provides superior multi-path rejection and axial ratio, a linear phase response, and tight Phase Centre Variation (PCV), while protecting against intermodulation and saturation caused by high level cellular 700MHz signals. This antenna is ideal for precision agriculture, autonomous vehicle tracking and guidance, and other applications where precision matters.

The TW7875 features a precision tuned, twin circular dual feed, stacked patch element. The signals from the two orthogonal feeds are combined in a hybrid combiner, pre-filtered to minimize interference from out of band signals such as Cellular LTE then amplified in a wide-band LNA and band-split for additional filtering and amplification stages prior to recombination at the output.

The TW7875 provides reception for signals in the bands 1164MHz to 1189MHz and 1557MHz to 1606MHz. It is housed in a magnetic mount, weather-proof enclosure.
