A Tallysman Accutenna®
TW3872E GPS L1/L2 + GLONASS G1/G2 Antenna

The TW3872E employs Tallysman’s unique Accutenna technology providing dual band GPS L1 & L2, GLONASS G1 & G2, Galileo E1, and BeiDou B1 coverage and is especially designed for precision dual frequency positioning.

This antenna features a precision tuned, circular dual feed, stacked patch element. The signals from the two orthogonal feeds are combined in a hybrid combiner, amplified in a wideband LNA, then band-split for narrow filtering in each band and further amplified prior to recombination at the output. The TW3872E has a pre-filter which prevents the front end LNA from being saturated by high near frequency or harmonic signals.

They also offer excellent axial ratio and a tightly grouped phase center variation.

The antenna is supplied with a standard 60mm diameter circular ground plane, with a coaxial cable terminated with a connector (right angle MCX is shown in the drawing). Mounting holes are provided for attachment to larger ground planes. Custom tuning and ground plane options may be available, depending on purchase level commitment.
