TW4327/TW4329 Low Current GPS/GLONASS Antenna

The TW4327/TW4329 is a very low power, compact wideband GNSS antenna covering the GPS L1, GLONASS L1 and SBAS (WAAS, EGNOS & MSAS) frequency bands (1575 to 1606 MHz.

This antenna features a bigger patch element with 40% wider bandwidth and a smaller foot print than most of its competitors. The LNA has a typical current consumption of just 1.75mA, with constant characteristics over supply voltages from 2.5V to 16V. The LNA is a two stage amplifier with a mid-section high rejection SAW filter, with an optional anti-jamming pre-filter(TW4329).

The TW4327/TW4329 are amongst the lowest power devices available, yet still provide excellent noise figure with 21dB nominal gain (TW4327).

The TW4329 variant provides a "Brick-Wall" pre-filter to protect against saturation by high level sub-harmonics and near L-Band signals.

The TW4327/TW4329 are housed in a very small footprint IP67 compliant magnetic mount enclosure.
